In Github Automatic File Upload Command

1) Create a folder Ex-git_upload

2)Create a auto_git_upload.bat file with proper harddisk file location and github repository location

```
@echo off
title Automatic GitHub Upload

cd /d "C:\Users\s2ag\Desktop\git_upload"

echo ====================================
echo      AUTOMATIC GITHUB UPLOAD
echo ====================================

REM Initialize Git
git init

REM Rename branch to main
git branch -M main

REM Configure GitHub remote
git remote get-url origin >nul 2>&1
if errorlevel 1 (
   git remote add origin https://github.com/Souhardyagayen99/github_auto_upload
) else (
   git remote set-url origin https://github.com/Souhardyagayen99/github_auto_upload
)

REM Check Git status
git status

REM Add all files
git add .
```

```
REM Check status again
git status

REM Commit changes
git diff --cached --quiet
if errorlevel 1 (
   git commit -m "Automatic project update"
) else (
   echo No new changes to commit.
)

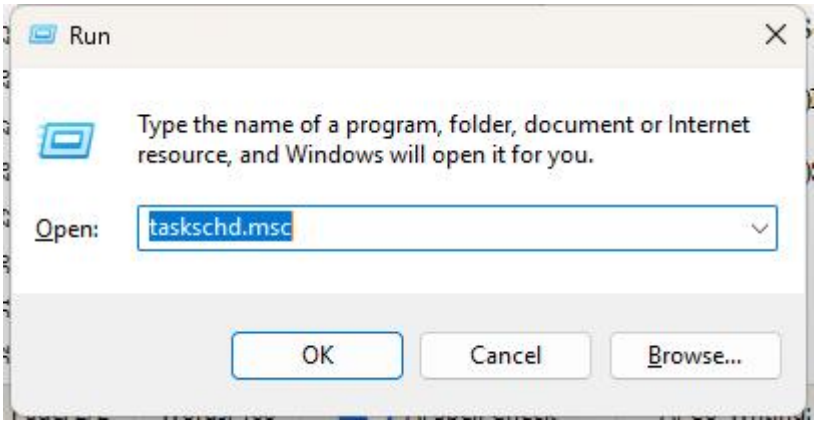

REM Push to GitHub
git push origin main --force

echo.
echo ====================================
echo      GITHUB UPLOAD COMPLETED
echo ====================================

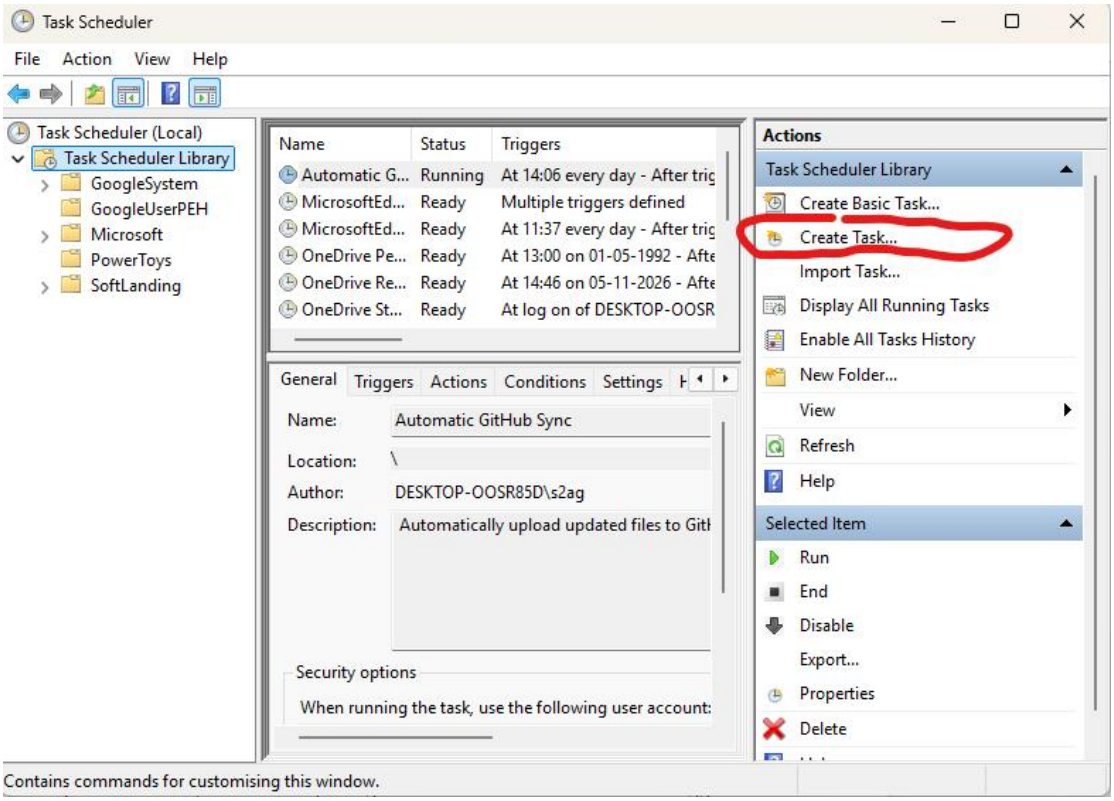

pause
exit
```

3)Press `Win + R`.

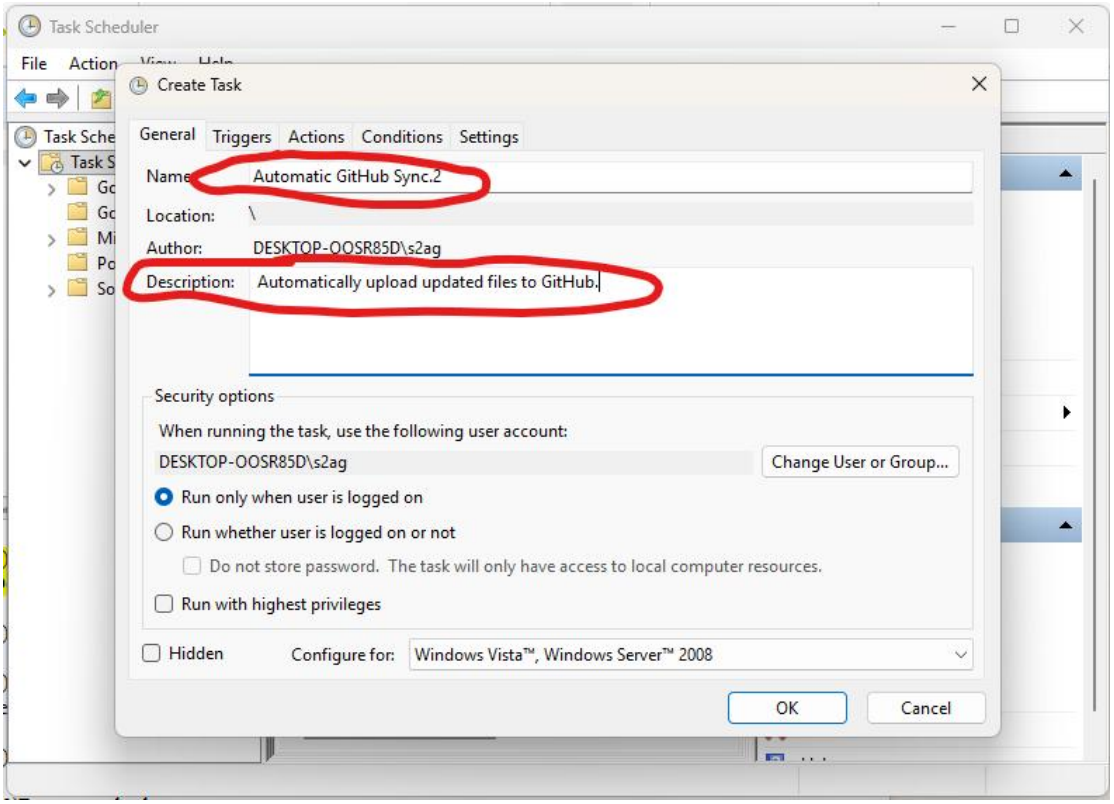

4)Type `taskschd.msc`.

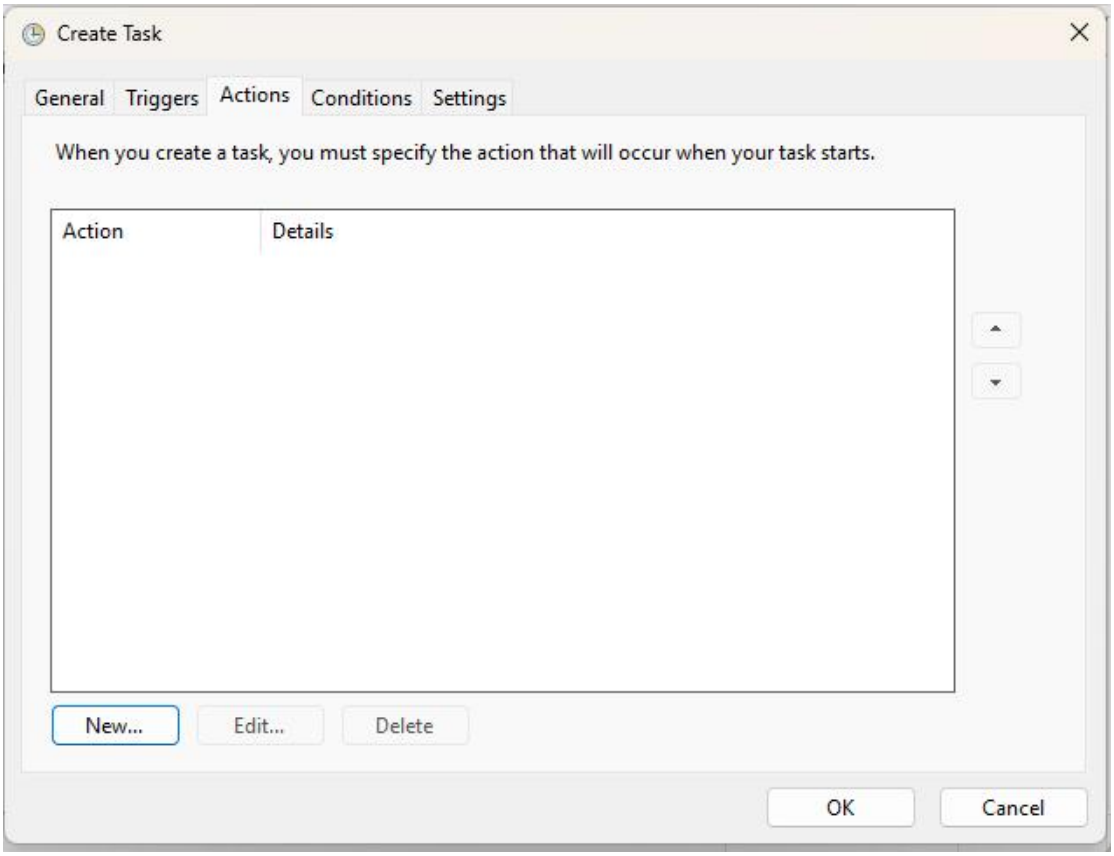

5) Click Create Basic Task.

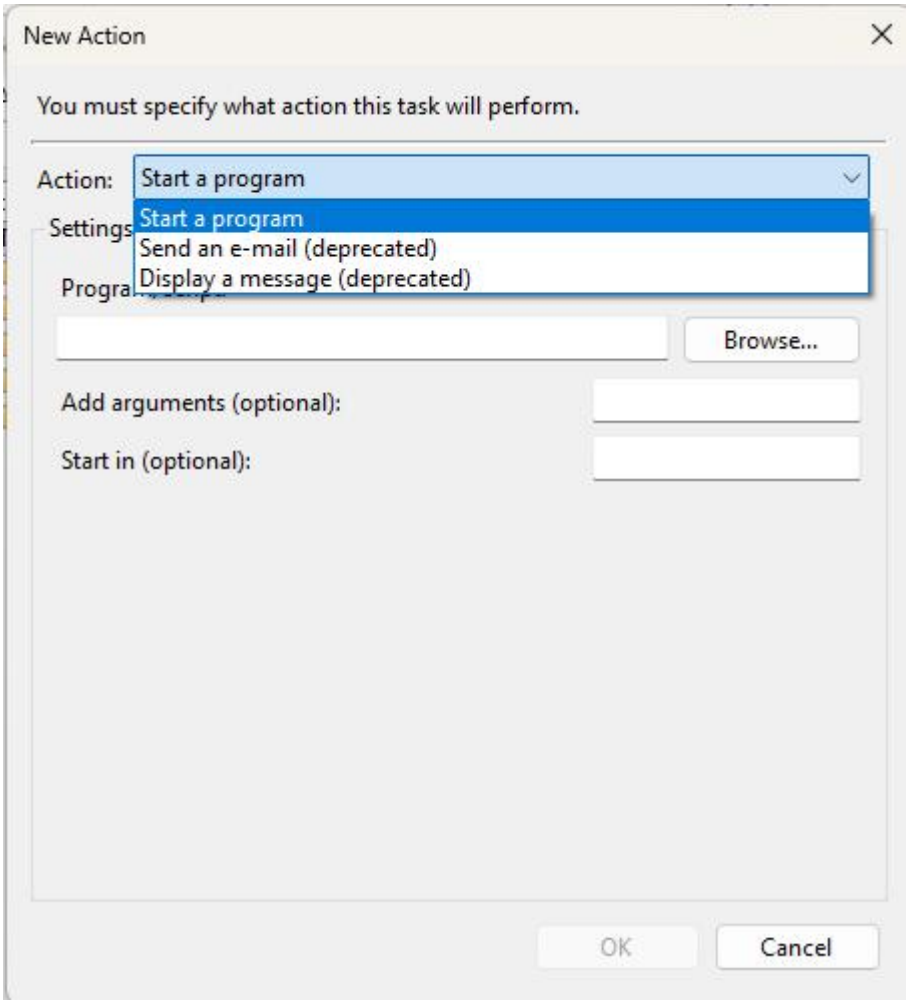

6) **Name:** Automatic GitHub Sync
Description: Automatically upload updated files to GitHub.

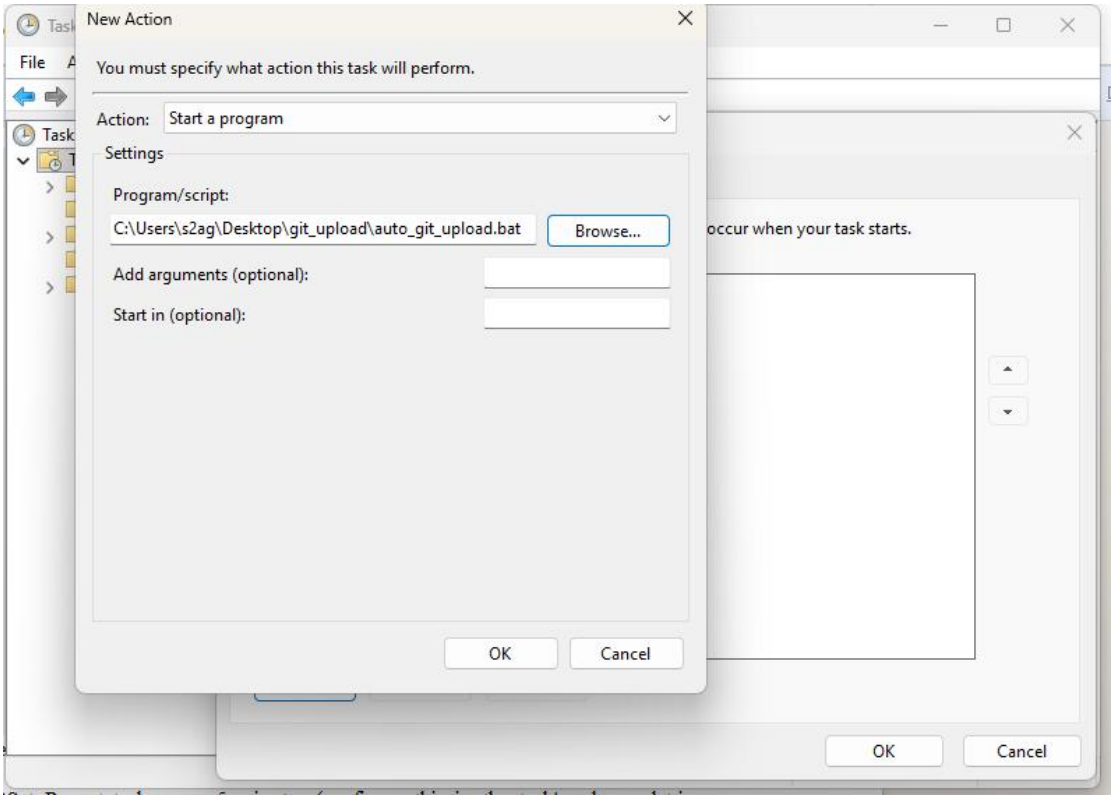

7) Click **Action**

Click New

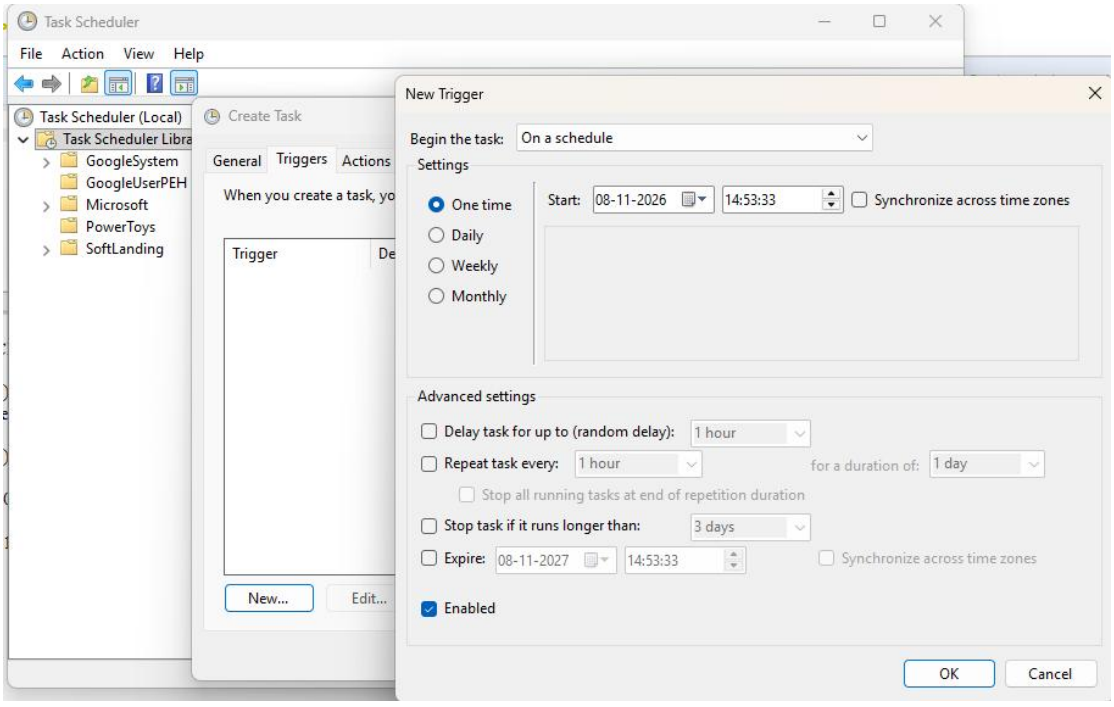

select Start a program

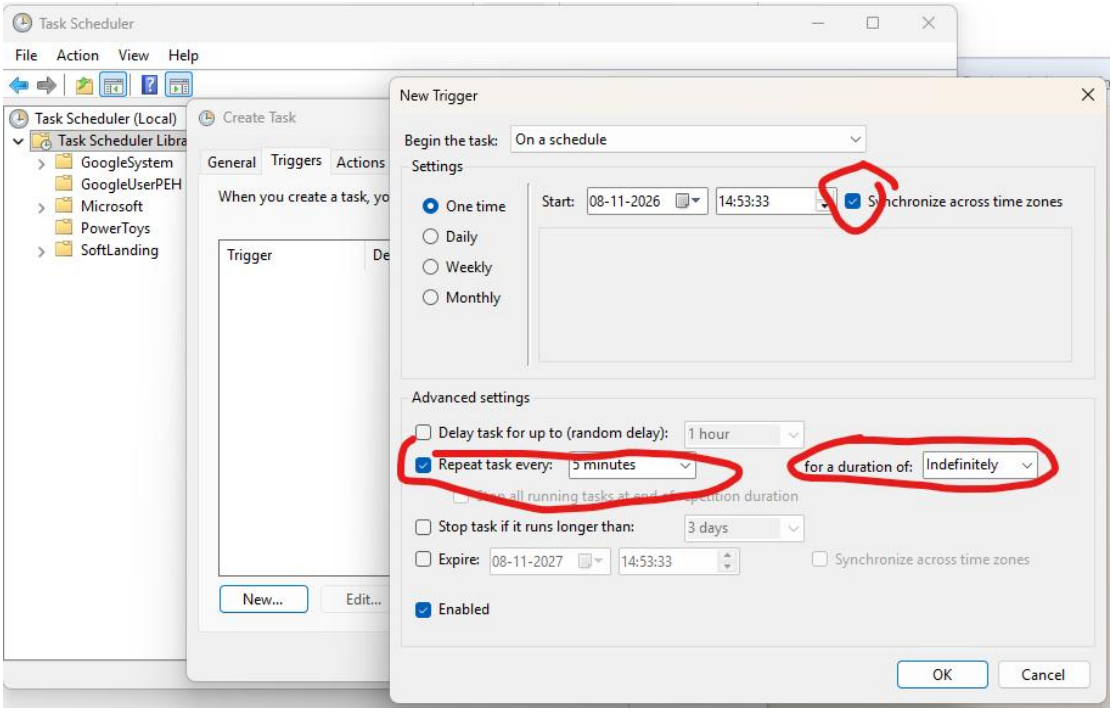

Click “Browse” and Select that auto_git_upload.bat file

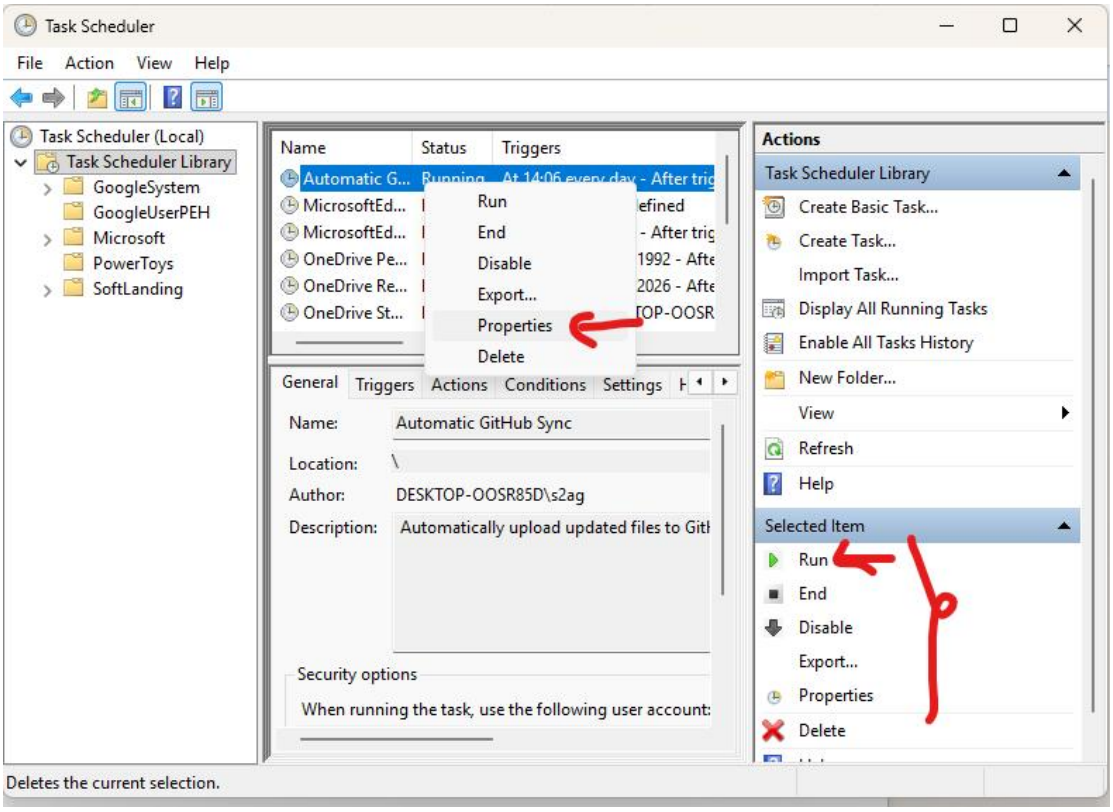

Then Click Trigger

Click New

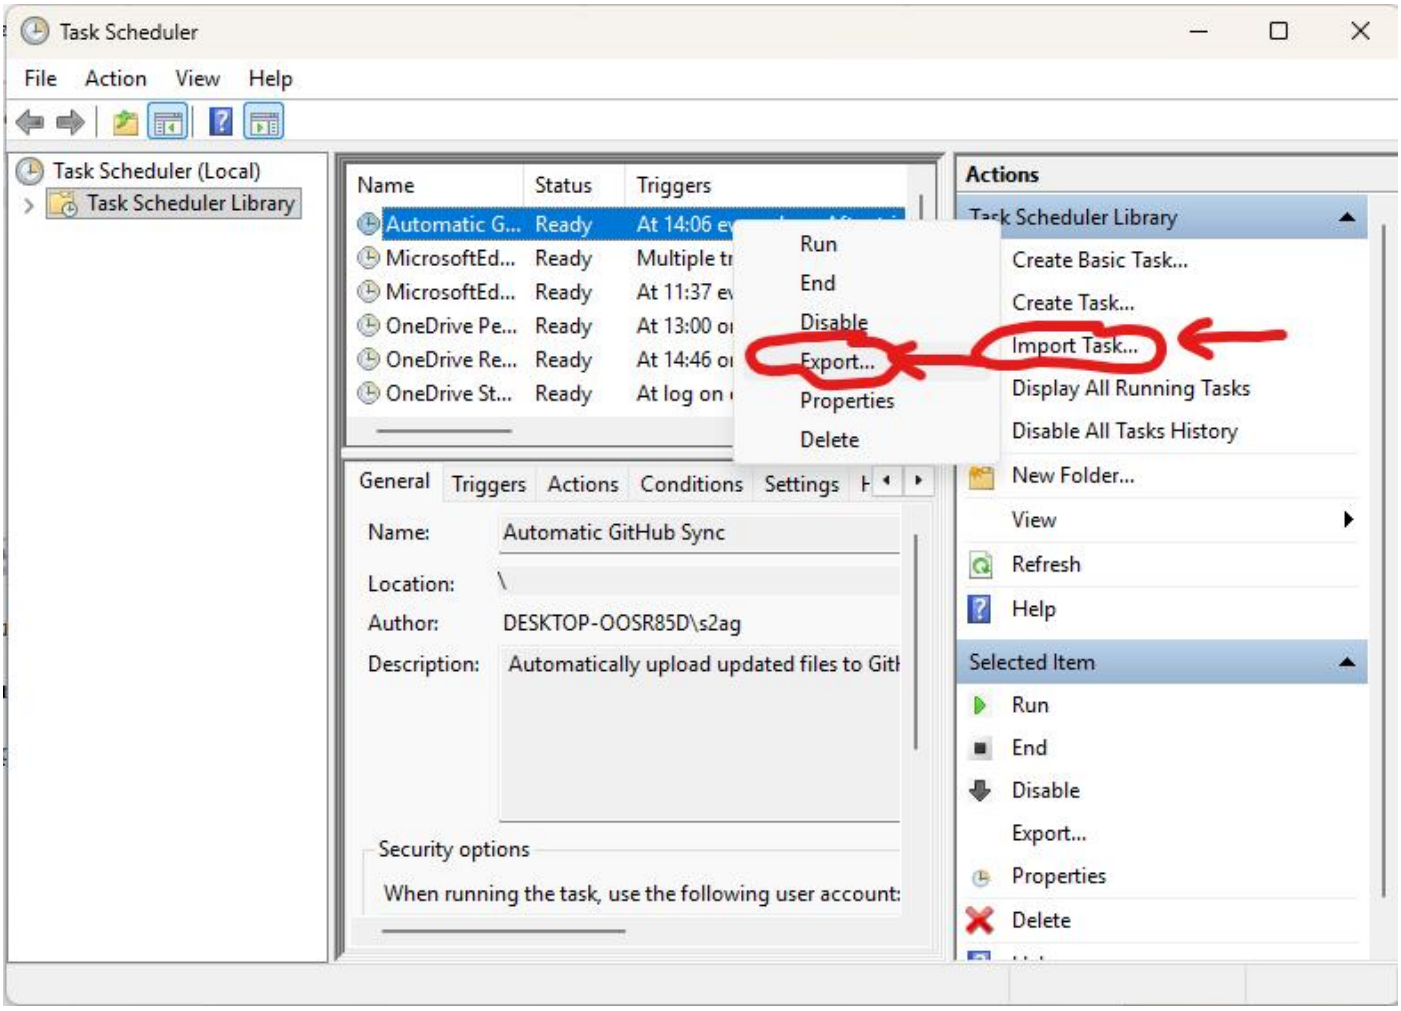

Click Ok --> Save

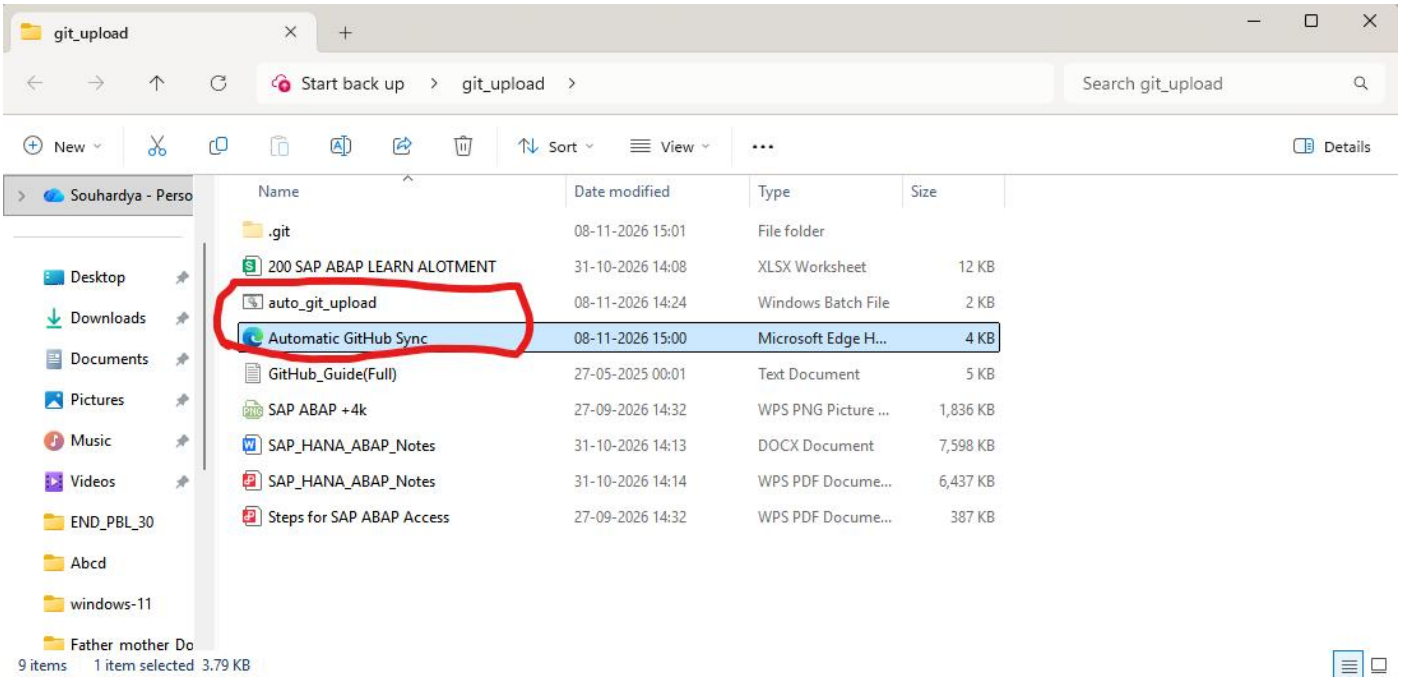

Now click run ro see

Click properties to change setting

You can Export File and Import file also for further use

This is the .bat file and for Import and Export .xml file

ALL THE BEST
